## Kim Jong Un Inspects Construction Sites in Samjiyon County

**Kim Jong Un**, chairman of the Workers' Party of Korea, chairman of the State Affairs Commission of the Democratic People's Republic of Korea and supreme commander of the Korean People's Army, gave field guidance to construction sites in Samjiyon County.

Looking at the master plan of construction of a township in the county and a map showing the bird's-eye view of the township in the county at the observation deck on Pegae Hill, the respected Supreme Leader **Kim Jong Un** was briefed on it.

He gave an instruction to include the plan of expanding and developing the area extending to the shore of Lake Samji in the plan of the township construction of the county in the future.

Looking at the map showing the bird's-eye view of the township in the county, he said the color of coating materials and metal roofing materials of the buildings should be harmoniously matched to their use and features and the color of the exterior walls should be selected to suit well the natural forests of Mt Paektu.

He said that the construction of Samjiyon County should be conducted, divided into the areas of education, dwelling houses, modern streets, industry, sports and cultural education, commercial service and tourism, in accordance with the ratified master plan.

He said that a model of city with modern civilization in the mountains should be made in the construction of Samjiyon County and the appearance of all the counties in the mountains of our country should be spruced up and built well by generalizing the experience and this process should be an occasion of great leap and a revolution in local construction.

As the township construction of Samjiyon County is conducted amidst the concern and support of the whole Party, state and society, it should be finished in the short period by scrupulously organizing the guidance and supply according to a three-dimensional and blitz war formula.

He underscored the need to introduce the construction method suitable for the features of the northern area with heavy snowfall and low temperature and

ensure the quality of construction on the highest level by intensifying the guidance and supervision of construction without concentrating on the speed only.

He said it is necessary to make a good design of forestation and tree planting according to the districts of the township area of the county and stressed the need to plant a number of white birch, a favorite tree of leader **Kim Jong Il**.

Going round the construction sites of the Management Office for Revolutionary Battle Sites in the Secret Camp of Mt Paektu and lodging houses for study tourists, he learned about the construction.

Many units are engaged in the construction of the county and so state construction supervision institutions should establish an orderly supervisory system and make increasingly exact demands, he said.

Going round the Rimyongsu area, he said that various types of dwelling houses and buildings should be placed in a diverse and peculiar way along the side of the ravine, preserving the characteristics of nature and topography.

During the county construction forest mustn't be wrecked, he stressed, calling for preserving the ecological environment in Mt Paektu area intact, mindful that the area is a sacred place of revolution where every tree and every blade of grass can never be neglected.

Through the work to spruce up Samjiyon County, we should renew not only the appearance of the township area but also the mental conditions of people and let the county play its role as a host, not making its independence and spirit of self-reliance fade while the whole country is aiding the county, he said, adding that the county should create a revolutionary spirit in the new century, a new spirit of the times in the course of building itself into a communist dreamland.

Noting that the construction of the county has undergone a lot of progress, he gave thanks to the builders for faithfully devoting themselves to the work for sprucing up the county into the one flawless in every aspect.

Accompanying him were Hwang Pyong So, Jo Yong Won, O Il Jong and Kim Yong Su, senior officials of the C.C., WPK.

## **Kim Jong Un Inspects Junhung Farm in Samjiyon County**

**Kim Jong Un**, chairman of the Workers' Party of Korea, chairman of the State Affairs Commission of the Democratic People's Republic of Korea and supreme commander of the Korean People's Army, gave field guidance to the Junhung Farm in Samjiyon County.

He went round a potato plot under the workteam 1 of the farm.

Noting that potato blight and flood damage have an impact on potato harvest in July every year, he asked how it is this year. He underscored the need for the agricultural field to take thoroughgoing measures of agricultural technique to

prevent damage by low temperature and blight, the most knotty problem in potato farming in northern alpine area.

He said that the agronomists and persons in charge of plots should enhance their responsibility and role so as to intensify prediction and forecast of potato blight and that a strict step should be taken to secure agricultural chemicals and immediately and intensively spray them upon potato plants in sickness.

He stressed the need to direct efforts to stockbreeding to establish the food production cycle of agriculture and animal husbandry, increase the fertility of soil of potato fields and conduct in a scientific and technical way the manuring and cultivation of potato fields including weeding, earthing up, fertilizing and extermination of harmful insects.

Looking round farm machines and tractors of the workteam, he acquainted himself with how many tractors it has and how it operates them.

Saying what he wanted to know with utmost care is the proportion and level of mechanization of potato farming, he noted that the level of the comprehensive mechanization of the farm should be raised decisively. He pointed out that the agricultural sector sets a good example for mechanization with the farm machines secured more than 20 years ago. Comprehensive mechanization should be realized with modern and efficient farm machines in line with the requirements of the steadily changing and developing reality and farm officials should add to their knowledge to know well the global trend of the development of farm machines and boldly set aim high, he added.

He said that if they take into full account how many and what kinds of farm machines are needed to do all of the farm work with the help of machines without hesitation and inform the Party of it, it will work hard to carry it into reality and that it is the Party's firm determination to first build the farm into an exemplary unit for modernization of farm machines and, on this basis, turn Samjiyon County and its farms into the standard unit of our country whose comprehensive mechanization is realized perfectly on a high level and a farm of comprehensive mechanization where farmers' ideal has come true.

Then he went to a storehouse of seed potatoes.

Appreciating the introduction of the automatic control system of environment which makes it possible to put the store of seed potatoes on a scientific basis by automatically measuring and controlling temperature, humidity and concentration of carbonic acid gas in the storehouse, he underlined the need to increase the capacity by properly estimating the quantity of seeds to meet the increased potato fields.

Now that seed is essential for potato farming it is necessary to establish an integral system of producing and keeping seed potatoes and put seed selection on a scientific and technical basis, he said.

It is necessary to breed and introduce per-hectare high-yielding potato species and to select and introduce species of potato fit for food as the Potato Farina Production Factory has been built, he said, adding: All the farms should not plant

some high-yielding species only, thinking of productivity, but introduce various species good to taste and ensure the quality of processed potato foods in production and thus raise the quality of potato production.

Going round the farm, he set forth the plan and direction for sprucing up the seat village in Junghung-ri, Samjiyon County.

He underscored the need to first remodel the units associated with leadership exploits of President **Kim Il Sung** and leader **Kim Jong Il** such as the Junghung Farm visited by them several times and then, on the basis of the experience, gradually change all the farms in the county, noting that the county shouldn't cling to only the remodeling of the township but propel it with the work to remodel the farm villages on a full scale.

He said that the Party would actively help build the Junghung Farm into a standard unit of village development, and gave an instruction on properly estimating and reporting the necessary materials and labor.

This meaningful year seeing the lapse of 20 years since the Party advanced the policy of bringing about a radical turn in potato farming, we have to realize without fail the wishes of Kim Jong Il, who was so anxious about the issue of potato farming in Ryanggang Province, by producing a high yield of potato in the native land of Kim Jong Il, he said.

Accompanying him were Hwang Pyong So, Jo Yong Won and Kim Yong Su, senior officials of the C.C., WPK.

## **Kim Jong Un Inspects Samjiyon Potato Farina Production Factory**

**Kim Jong Un**, chairman of the Workers' Party of Korea, chairman of the State Affairs Commission of the Democratic People's Republic of Korea and supreme commander of the Korean People's Army, again gave field guidance to the modern Samjiyon Potato Farina Production Factory which was built in Samjiyon County.

He again visited the factory to discuss measures on the spot with a determination to build a new process producing 2 000 tons of processed potato food in a year with potato farina as raw material, as the process of producing potato farina with a capacity of thousands of tons was built last year.

Going round the potato farina production process, he said that the factory has not been operated in full capacity after its appearance but it should produce a huge amount of farina with the potatoes harvested this year so as to supply a lot of potato farina and processed potato food to the people.

He underscored the need to equip the factory with modern machines for making a variety of foods, including noodle, zeppole, cake and nutritious rice, with potato farina and produce tasty and nutritious processed potato foods on a full scale.

He called for building modern potato farina factories at the potato production bases in the northern alpine region on the basis of the experience and design gained in having built a standard factory that can produce potato farina and various kinds of processed potato foods for the first time in our country.

He acquainted himself with the store of produced potato farina and highlighted the need to thoroughly ensure the quality of potato farina by keeping good conditions for the store and to establish a scientific quality check system.

He also called upon the factory to take good care of and manage production facilities and equipment on a regular basis, ensure hygienic environment enough to fit for a foodstuff production process and organize manpower management to ensure profitability so as to put the production on normal footing at a high level.

He looked round a Korean-style circulating fluidized-bed boiler newly built at the factory.

He noted with high appreciation that the new boiler based on our own design, technology and efforts to suit the actual conditions can supply enough steam needed for production process with less coal consumption.

Now that the factory has all production process in a perfect way, it is urgent to increase the output of potato for putting its production on a normal basis, he said.

After learning about the potato farming of the county, he stressed the need to conduct sowing in right season and in a qualitative way, manure and cultivate potato fields in a scientific and technical way and realize the comprehensive mechanization to radically increase per hectare yield.

The Party will solve the problem of vehicles necessary for organization of potato transport fleet to carry harvested potato, he said, adding that it is important to gather it in time without wasting even a potato and fully supply potato to the factory.

Saying that the Party harbors great expectations over the Samjiyon Potato Farina Production Factory which opened up a new path in the potato processing industry of our country, he earnestly called on its officials and employees to keep the factory in full-capacity operation in the spirit of devoted service to the people and thus make the factory built by the Party with much care truly contribute to the improvement of the people's diet.

He was accompanied by Hwang Pyong So, Jo Yong Won, O Il Jong and Kim Yong Su, senior officials of the WPK Central Committee.

## **Kim Jong Un Has Photo Session with Samjiyon County Party Committee Officials**

**Kim Jong Un**, chairman of the Workers' Party of Korea (WPK), chairman of the State Affairs Commission of the Democratic People's Republic of Korea and

supreme commander of the Korean People's Army, summoned the officials of the Samjiyon County Committee of the WPK and had a significant photo session with them.

He praised the officials of the Samjiyon County Party Committee for having taken the lead in the dynamic drive true to the idea and intention of the Party Central Committee for building the county, a sacred land of the revolution, into a model of the country and fairyland of communism, before having a photo session with them in front of the statue of leader **Kim Jong Il** in the county.

Noting that a county in our country is very important as local base, he said that to strengthen the county is an urgent matter in realizing comprehensive prosperity of the country. The Party Central Committee attaches great importance to the duty and role of the county party committee, a hostess and staff which organizes and guides all the work of the county, he stressed.

He stated that the officials of the county party committee should become core elements steeped in the idea of the Party Central Committee to the marrow of their bones and the county party committee should become the powerful driving force that accepts the Party policies in time and takes the lead in the efforts to carry them out.

Hoping that the officials of the county party committee will be true servants of the people, he called on them to regard and uphold the people as Heaven and as leader **Kim Jong Il**. He earnestly said that the county party committee should be the home which the people frequent to tell of their inward thoughts and should take roots in the mind of the people.

Saying that he would become a member of the Samjiyon County Party Committee to make contributions to sprucing up the county, a native place dear to our people, into the fairyland of the people best to live in our country, he ardently called upon the officials to work heart and soul for the modernization of the county with the mind to spruce up their own native homes.
