White Paper on Human Rights Violations in U.S. in 2017 Issued in DPRK

Pyongyang, January 30 (KCNA) -- The DPRK Institute of International Studies Tuesday released the "White Paper on Human Rights Violations in U.S. in 2017".

According to the white paper, soon after being inaugurated as president, Trump filled the important posts of his administration with billionaires, who had "contributed" to his election campaign, and their mouthpieces.

Secretary of State Tillerson, Secretary of Commerce Ross and also the secretaries of Treasury and Defense are all billionaires from conglomerates. The total assets of public servants at the level of deputy secretary and above of the current administration are worth of 14 billion US\$.

The anti-popular policies the Trump administration pursued openly in one year were, without exception, for the interests of a handful of the rich circles.

In the U.S., where genuine freedom of the press and expression does not exist, intervention in and crackdown on the press grew more intensified over the past one year.

In 2017 the cases of searching and confiscation against journalists accounted for 12 and the cases of violation against them for 11. Moreover, 19 persons in the domestic press circles and four foreign journalists were arrested or detained.

Racial discrimination and misanthropy are serious maladies inherent to the social system of the U.S., and they have been aggravated since Trump took office.

The racial violence that took place in Charlottesville, Virginia, on August 12 is a typical example of the acme of the current administration's policy of racism.

In the U.S. the absolute majority of the working masses, deprived of elementary rights to survival, are hovering in the abyss of nightmare.

As a result, during the first week of March, 241 000 persons joined the large contingent of the unemployed; in May 9 000 public servants were fired from governmental agencies; in September the number of the unemployed increased by 33 000 as compared to that of the previous month.

In particular, unemployment of young people has become a matter of serious social concern; currently the unemployment rate of young people under 25 is 7.9%, and 31% of graduates from high schools do not have proper jobs.

According to what the U.S. administration made public, in 2017 the homeless numbered 554 000, about 10% increase as compared to that two years ago, and number of the poor families, living in rented rooms devoid of elementary facilities for living, is on the steady rise.

The soaring school expenses are plunging the students into the hell of loans.

Those who are diagnosed with a disease but cannot afford to pay their medical fees total 50 million. Flu, lung diseases and asthma cause 36 000, 40 000 and 150 000 deaths, respectively, on an annual average.

On the other hand, health-hazardous disqualified products are on sale across the country, which often leads to an outbreak of infectious diseases.

The U.S. is one of the world's two countries that have yet to embrace paid maternity leave.

Over the past decade the proportion of American women who live below the poverty line has risen from 12.1% to 14.5%, and they usually receive 25% less salary than their male colleagues of the same post.

A woman is sexually abused every 89 seconds.

According to basic statistics, about 61 100 gun-related crimes took place in the U.S. last year, leaving 15 488 dead and 31 058 wounded.

According to data, the number of marijuana users in the U.S. was more than 20 million, a 3% increase as compared with that a decade ago; and over 90 people lose their lives on a daily average from drug abuse.

In the U.S. where crimes and evil are rampant, the number of imprisoned criminals tops 2.3 million and 70 million are ex-offenders.

The U.S., "guardian of democracy" and "human rights champion", is kicking up the human rights racket but it can never camouflage its true identity as the gross violator of human rights, the white paper said.

KNPC Spokesman Calls for Foiling U.S. Nuclear War Moves

Pyongyang, January 28 (KCNA) -- A spokesperson for the Korean National Peace Committee issued a statement on Sunday with the approach of 60 years since the U.S. officially published the introduction of nuclear weapons into south Korea.

The U.S. officially announced the above-said introduction on January 29, 1958 and undisguisedly opened to public nukes including atomic guns and Honest John nuclear missiles, the statement said, and went on:

Thenceforth the Korean Peninsula, once a nuclear free zone, has turned into a nuclear powder magazine and a source of nuclear war of the U.S. and the Korean nation has been at constant peril of nuclear war due to its nuclear stick.

Even at this time when the climate of national concord, unity and detente is growing strong on the Korean Peninsula thanks to our proactive measures and sincere efforts, the U.S. is bringing nuclear carrier task forces, nuclear strategic bombers and other huge nuclear war means to south Korea and its vicinity, imposing constant nuclear war threat and blackmail on our nation.

What should not be overlooked is the fact that the U.S. is planning to designate the DPRK as "potential state of nuclear threat" and stipulate even the scenario for preemptive nuclear strike in the "2018 nuclear posture review report" to be published around early February.

The past sixty years are a history of heinous aggression and crimes in which the U.S. reduced south Korea into the world's biggest nuclear weapons arsenal and most dangerous seat of nuclear war and has constantly threatened the destiny of the Korean nation with nukes.

The U.S. would be well advised to behave itself, aware that the days have gone for good when it could pose its unilateral threat to the DPRK with a nuclear stick.

The south Korean authorities should stop the shipment of U.S. nuclear strategic assets and aggressor forces which will spawn bloodshed on this sacred territory, cease the nuclear war exercises with the U.S. and respond to our sincere efforts for detente.

All compatriots in the north and the south and abroad should reject the anti-DPRK moves of the U.S. to bring clouds of a nuclear war to hang over Korea, and conduct more vigorous anti-U.S., anti-war struggle to drive the U.S. nuclear hardware and aggression forces out of south Korea.
