Kim Jong Un Inspects Orangchon Power Station under Construction

The respected Supreme Leader **Kim Jong Un** inspected the Orangchon Power Station under construction.

He exchanged greetings with the officials who greeted him, appreciating their services. He said that he came to personally learn about the situation and take measures as the project has not yet been completed although it has been more than 30 years since President **Kim Il Sung** gave an instruction to build the power station.

He first went round the construction site of the Phalhyang Dam.

Pointing out that only 70 percent of the project has been done although it has been 17 years since the construction started, he acquainted himself with the reason of the delayed project.

Now upper organs, in disregard of the situation of lower organs, only make a wordplay that the construction of the Orangchon Power Station is a task to be fulfilled in the period of the 5-year strategy for the national economic development, he said, pointing out that the Cabinet has only specified the project as a target project that should be accelerated with concentration of efforts in reports of its series of joint meetings or on the list of its stereotyped work plan but never taken any practical and blitz measure for economic and organizational work. He reprimanded the leading officials of the Cabinet for leaving the project to the province only and not paying attention to it.

Worse still, the officials who are responsible for the national economy make their appearances in every inaugural ceremony of power stations though they never inspected the power stations and dams when they were under construction, he added.

Noting that if the Orangchon Power Station is constructed, it will tangibly contribute to promoting the economy and people's livelihood in North Hamgyong Province where industrial establishments are located densely, he criticized the officials of the province and county for having not sent a letter to him in connection with the situation though they were much concerned of the delayed construction of the power station which is vital and urgent for the work of the province, and for having neither worked in a far-sighted manner nor focused their effort on the construction for the mere reason that it gives no immediate benefits but requires heavy investment.

He took a revolutionary measure by giving an instruction for the Party Central Committee to provide organizational guidance to the construction of the dam and the power station by mobilizing all party organizations and members and thus complete the project by October 10 next year.

Then, he went round the Orangchon Power Station No. 5.

Watching generating equipment installed at the power station, he said highly efficient and modern generating equipment should be installed and operated in full capacity to steadily increase the production of electricity, pointing out that the power station was built with so much effort but it fails to produce electricity in full capacity.

Noting that if the loss of electricity in transmission is decreased, electricity reserves equivalent to building some new power stations will be gained, he said produced electricity should be effectively used by taking a decisive measure to decrease the loss of electricity in transmission though it may require much effort.

Noting that the builders of the power station have so far done much with pure conscience despite difficulties, whether their efforts are known or not, and the dam is growing thanks to the intense loyalty and inexhaustible strength of the builders who have performed labor feats for implementing the Party policy, he ardently called on the whole country to turn out in the general drive, keeping step with the builders.

He was accompanied by Hwang Pyong So, Jo Yong Won, O Il Jong and Kim Yong Su, senior officials of the Workers' Party of Korea Central Committee.

Kim Jong Un Inspects Fish Farms

The respected Supreme Leader **Kim Jong Un** gave field guidance to the Raksan Offshore Salmon Farm and the Sokmak Atlantic Salmon Pedigree Farm run by Unit 810 of the Korean People's Army.

He visited the Raksan Offshore Salmon Farm.

Going round the room for education in the revolutionary history and cage-net fish breeding ground, he acquainted himself in detail with the production at the farm.

It is important to create clean environment and establish a strict hygienic and anti-epidemic system in fish breeding grounds like in stockbreeding, he noted with appreciation, adding that ten-odd settling troughs were newly arranged at rivers flowing to Raksan Bay and at waste water outlets of industrial establishments and seaweed and tangle culture grounds were built around cage-net fish breeding ground to prevent sea pollution and protect ecological environment.

He said that advanced technology should be positively introduced to put the offshore fish farming, cage-net fish farming, on a scientific and industrial basis and big efforts be directed to the work for preserving the uncontaminated ecological environment of sea on a high level so as to expand the water areas fit for breeding Atlantic salmon and produce this kind of fish in a larger quantity.

It is necessary to raise the level of putting the production of processed salmon on a scientific, automatic and modern basis, strictly ensure its hygienic safety and quality and realize its standardization, he said, adding that Atlantic salmon bred on the East Sea of Korea and processed fish should be intensively supplied to the Pyongyang Taedonggang Seafood Restaurant to improve the people's diet.

He also toured the Sokmak Atlantic Salmon Pedigree Farm.

Going round the room for education in the revolutionary history, open-air fishing pond and other parts of the farm, he learned about its management and operation.

He highly appreciated the officials and employees of the farm for having done a lot of work through a dynamic drive for updating the farm on a high level over the last three years to carry out the tasks given by him on the spot in May 2015.

They spruced up the room for education in the revolutionary history, established an automatic control system for water recycling by computer

and newly built oxygen-generating station, cylinder caisson and ultraviolet sterilizing station to increase the capability of water purification and oxygen saturation. They also rebuilt the modern fattening ground in a hygienic and anti-epidemic way to raise the survival rate of fry salmon, remodeled 54 concrete fishing ponds at 6 indoor blocks into resin ones and settled the problem of disposing waste water to decisively decrease the death rate of fish. Besides, they newly built superfine grinder, bulking feed plant and 1 000-ton feed storehouse and established a system of feed production by antibiotics.

Giving appreciation of such achievements, the Supreme Leader said it is very admirable that our scientists established a technique for preventing group death of salmon fries and thus made it possible to breed hundreds of thousands of salmon fries at sea this year.

Now it is possible to further activate the culture of salmon given the enough material and technical foundations for safety production of Atlantic salmon and the increase of the level of its scientification and modernization, he noted, expressing his great pleasure over the appearance of a promising delicious fish producer in the country.

He had a photo session with the officials and employees of the pedigree farm, expressing the expectation and belief that they would be a model of the country in implementing the WPK's pisciculture policy by steadily adding to the achievements under the banner of putting the fish farming on a Juche, modern, scientific, industrial and intensive basis.

Accompanying him were Hwang Pyong So, Jo Yong Won, O Il Jong and Kim Yong Su, senior officials of the WPK Central Committee.

Kim Jong Un Inspects Chongjin Shipyard

The respected Supreme Leader **Kim Jong Un** gave field guidance to the Chongjin Shipyard.

He went round the room for education in the revolutionary history at the shipyard. He said that its officials and workers should create new miracles and innovations in shipbuilding and glorify the undying leadership exploits of our Party by carrying forward the baton of loyalty and self-reliance recorded in the proud development course of the shipyard with great pride and honor of working at the glorious workplace visited by President **Kim Il Sung** 12 times and by leader **Kim Jong Il** 6 times.

He learnt in detail about the overall situation of the shipyard, going round the anchor chains workshop inspected by **Kim Il Sung** and **Kim Jong Il** and other production processes and shipbuilding site.

After acquainting himself with the structure and tactical and technical specifications of a newly built warship and its weapons and equipment, he boarded the warship on a trial navigation. He praised the workers of the shipyard for having successfully built the warship with excellent mobility and firepower capability to strengthen the navy by fully displaying the revolutionary spirit of self-reliance.

The Chongjin Shipyard is able to build various ships better in the future as it has a history of shipbuilding and high technology, he said, indicating detailed tasks to further modernize the shipbuilding process.

Noting with firm belief in the workers of the Chongjin Shipyard, he decided to entrust it with the building of a newly planned modern cargo-passenger ship, he said that the shipyard can easily carry out this task as it had already experienced building the ship Mangyongbong-92. The shipyard should launch and conduct the work in a bold and revolutionary way and, in this course, further develop its shipbuilding technology and put the production processes on a scientific and modern basis of higher level and thus take the lead in bringing about a great leap in the development of the country's shipbuilding industry, he added.

He expressed belief that the officials and workers of the Chongjin Shipyard would perform shining feats in the struggle to attain the new goal set forth by the Party and creditably live up to the expectation of the Workers' Party of Korea Central Committee.

He was accompanied by Hwang Pyong So, Jo Yong Won, O Il Jong and Kim Yong Su, senior officials of the C.C., WPK.

Kim Jong Un Visits Machine Factory of Ranam Coal-mining Machine Complex

The respected Supreme Leader **Kim Jong Un** gave field guidance to the September 1 Machine Factory under the Ranam Coal-mining Machine Complex.

He acquainted himself with the production of the factory, going round the room for education in the revolutionary history, sci-tech learning space, machine assembling ground and other places of the factory.

Praising its workers for having conducted fierce offensive to build modern buildings for production and life and spruced up the inside and outside of the factory, he stressed the need to continuously push ahead with technical updating of production processes and equipment as well as regular management of production buildings.

Going round workplaces busy with production of machines and ordered equipment, he stated that the officials, workers and technicians of the factory should intensify the creative cooperation and the mass technological innovation movement to increase the production capacity and realize the modernization and automation of machines at a high level.

It is necessary to bring science and technology close to production and work out a plan in a bold and big way and stubbornly carry it into practice at the factory and thus further consolidate its material and technical foundations so as to produce machines requiring high technology, he said.

The sci-tech learning space should be arranged better and study-while-working habit thoroughly established at the factory so that all its employees can master machine equipment and fully arm themselves with the modern science and technology to radically increase the quality of machines, he noted.

He said that the factory should pay attention to improving the supply service for employees and providing them with good material and cultural living conditions to bring about a great upsurge in production.

Saying that the factory's duty and role are very important, he set forth the tasks and ways for developing the factory into a leading machine producer.

He had a picture taken with the officials and workers of the factory, expressing the belief that they would bring about a fresh leap in the production of high-efficiency and modern machines of various kinds urgently needed for different fields of the national economy and make positive contributions to the development of the machine-building industry of the country.

He was accompanied by Hwang Pyong So, Jo Yong Won, O Il Jong and Kim Yong Su, senior officials of the Central Committee of the Workers' Party of Korea, and Ri Hi Yong, chairman of the North Hamgyong Provincial Committee of the WPK.

Kim Jong Un Inspects Yombunjin Hotel under Construction

The respected Supreme Leader **Kim Jong Un** inspected the Yombunjin Hotel under construction.

The construction of the Yombunjin Hotel began in July 2011 in hearty response to the teachings given by leader **Kim Jong Il** on several occasions to successfully build a hotel in Yombunjin with clean sea waters and good white sandy shore.

The building of main structures has been finished and the interior building phase is underway.

The Supreme Leader referred to the fact that the plastering of the inside hotel has not yet been finished though six years passed since the completion of its frame project.

He called for taking a decisive measure to quickly complete the construction, saying that although leader **Kim Jong Il** chose the site of the hotel in the picturesque Yombunjin shore and paid attention to the construction till the last moments of his life while learning about it time and again, the project has not yet been finished and that it is a very mistake to delay the construction at a time when the entire Party is concentrating all its efforts on implementing the behests of President **Kim Il Sung** and leader **Kim Jong Il** while taking it as the main line and as lifeline.

He indicated the construction orientation and ways to turn the Yombunjin area into a wonderful resort for the people, saying that the Party will take a step for supplying funds and materials and the North Hamgyong Provincial Party Committee should encourage the officials and builders of the province to the campaign for implementing the behests of the leader so as to build the hotel by Oct. 10 next year and make a report of loyalty to **Kim Jong Il**.

Saying that Yombunjin is an ideal place for the people to take cultural rest anytime as its seashore scene is unusually beautiful and it has good traffic conditions as it is located near railways, shipping lane and roads, he stressed the need to turn the area into the Yombunjin coast park of peculiar style by building more lodging quarters and service facilities of various forms and purposes in the section of more than 600 meters along the shore around the hotel.

Pointing out that the ground design for exterior of the hotel is not good and its accommodation capacity is small, he gave instructions for the central and provincial designing forces to make an overall examination of the design and redesign it in keeping with modern tastes from a new angle with their concerted efforts.

Saying that he will send professional technical forces of national institutions to help the province conduct the finishing construction of the hotel with its own efforts, he stressed that the province should strengthen and develop its designing and building forces in this course.

He said that if modern hotels with adequate communal amenities are built in Yombunjin and its vicinity as there are scenic spots and famous hot springs, the people in the province and other people from across the country would take enough rest and lead a cultural and emotional life to the full while enjoying mountain-climbing, sea-bathing, angling, river-fishing and hot-spring cure in the area.

He was accompanied by Hwang Pyong So, Jo Yong Won, O Il Jong and Kim Yong Su, senior officials of the Central Committee of the Workers' Party of Korea.

Kim Jong Un Inspects Onpho Holiday Camp

The respected Supreme Leader **Kim Jong Un** inspected the Onpho Holiday Camp.

He visited it late at night and acquainted himself with its management, operation and situation.

Looking round the bathroom of the camp, he pointed out its very bad condition, saying bathtubs for hot spring therapy are dirty, gloomy and unsanitary for their poor management. If the camp draws criticism by the people instead of their favor due to such poor operation and management though it is holding a signboard indicating that it is a building visited by President

Kim Il Sung and leader **Kim Jong Il**, it will commit a sin of bringing to naught the exploits of the great leaders who built a holiday camp for the people before anything else in the scenery place where hot spring water is gushing out all the year round, he said.

He asked the chairman of the Kyongsong County Party Committee about the output of hot spring water and its temperature at the point of gust and accommodation capacity of the camp and the number of rest-home visitors, and gave a task to modernly and newly build the camp.

Calling for sprucing up the area of the camp which is famous for spring water in the country to be a peculiar resort which meets the convenience and growing cultural and emotional demands of the people at the best level,

he said he would make sure that the People's Army would excellently build it next year and present it to the people as a gift.

He said the camp should be built excellently to be an all-round service center, therapy center with all catering establishments so that people can enjoy full rest and spring water therapy during their holiday, adding its design should be worked out in a peculiar manner to meet the features of the spring water area and thus build the camp into a model of the spring water holiday camps without an equal in the country.

Having a talk with the chairman of the Kyongsong County Party Committee, he asked him about the work of the county party committee and the work it plans to do in the future, he gave precious teachings for developing the county in a peculiar manner.

Noting that the county has fields, mountains and a sea and good traffic conditions, he said that as it has some foundation for developing industry, agriculture and fisheries, the county party committee should study and work hard for the earlier development of the economy of the county which has favorable natural and economic conditions.

He expressed expectation and belief that the county party committee would bring about a decisive turn in the struggle for turning the county into a marvelous one good to live with its own efforts by inspiring the people in the county to the drive for implementing the party policy.

He was accompanied by Hwang Pyong So, Kim Song Nam, Jo Yong Won, O Il Jong and Kim Yong Su, senior officials of the Central Committee of the Workers' Party of Korea.

Kim Jong Un Inspects Jungphyong-ri, Kyongsong County

The respected Supreme Leader **Kim Jong Un** inspected Jungphyong-ri, Kyongsong County, North Hamgyong Province with the idea of building a large-scale vegetable greenhouse farm in it.

Kim Jong Un has given his whole mind to sufficiently supplying the vegetables to the people by massively cultivating them of various sorts even in the northern oceanic climate more unfavorable than the plain area. He went to the spot with the idea of building a large-scale vegetable greenhouse farm in the sector of an air force regiment in Jungphyong-ri to be removed according to a decision made by the Central Military

Commission of the Party, personally learned about the site and clarified the long-term plan for building a huge vegetable greenhouse farm.

Looking at the vast land of the sector in an airport, he said that if we build a vegetable greenhouse farm of one hundred hectares, it will be splendid, and such area of the greenhouse will fully meet the needs of the people in the province. He expressed great satisfaction, saying he is very pleased today and that he is most pleased when he does a worthy thing for the people one by one like this.

Saying that the people's army should build the farm at lightening speed as it is the first gigantic and large-scale construction in the country, he stressed that it is necessary to build it at the highest level while ensuring both construction speed and quality as it is the farm to be provided by the Party with firm determination, not sparing the investment for the people in North Hamgyong Province.

He called for building the farmers' residential area and cultural and welfare establishments in a modern and civilized way and thus successfully sprucing up the farm village as a model of socialist rural cultural construction and socialist paradise in which it is nice to live and work.

He indicated a general orientation arising in building the farm and operating it including the issue of organizing the powerful headquarters for dynamically pressing ahead with the construction and permanent organs of different fields, the issue of manufacturing greenhouse equipment and supplying the construction materials and the issue of training the greenhouse engineers and securing seeds and manpower.

He was accompanied by Hwang Pyong So, Jo Yong Won, O Il Jong and Kim Yong Su, senior officials of the Central Committee of the Workers' Party of Korea.

Kim Jong Un Inspects Chongjin Bag Factory

The respected Supreme Leader **Kim Jong Un** inspected the Chongjin Bag Factory.

In recent years he established production processes of materials for manufacturing bags including cloth and zip capable of satisfying the needs of the country one by one and, on the basis of them, set forth the task for pushing ahead with the work to successfully build an independent factory

for production of schoolbags in every province and to mass-produce and supply bags of good quality with supplied materials as an important policy.

However, the North Hamgyong Provincial Party Committee did not sincerely accept the Party's policy on newly building a bag factory in line with the capacity while disregarding the work initiated by the Party to provide all necessary things for the schoolers with our own products, giving top priority to the education for the generations to come. It offered shabby rooms of the building at the Chongjin Regenerated Fibre Factory for a bag production base and thus caused great anxiety to **Kim Jong Un** who came to the factory to learn about the bag production in localities.

The Supreme Leader pointed out that the Provincial Party Committee is working in a perfunctory manner, disregarding an important policy to be prioritized by it and that its attitude toward the acceptance and implementation of the Party policy is very wrong and the committee has no revolutionary spirit and responsible attitude of working hard to implement the Party policy.

Looking round the sample room of the factory, he said that the factory's level of producing bags is high though its production began one and half a year ago and the skills of its employees are high and that the bags are diverse in color and size and they were well made with much care according to the ages.

He said it is necessary to make the shoulder straps of bags with thicker sponge, noting that they should be made with twice thicker sponge than now so that their users may not feel pain

Stressing the need to strive for further raising the quality of bags, he said that the central factories responsible for production of raw materials should produce the accessories of bags such as cloth, zip and tape with locally available materials and ensure their production on a high level.

He called for qualitative and meticulous sewing to produce quality bags so that they should not get unfastened or ripped though children and pupils handle them at random.

It is necessary to further reduce the bag production cost, he said, giving an instruction to reexamine the price of school things including Mindulle notebooks and bags being supplied to pupils.

Saying that even though the state has more burdens, it should not give inconvenience to the people, he stressed it is needed to correct the price after listening to the view of inhabitants.

He charged that there is a problem in the work of the Provincial Party Committee as it has not yet built a design room, paying no attention to a poor products show room.

Noting that he gave an instruction for provincial party committees to build a schoolbag factory in a responsible manner in every province and learned about the construction of bag factories in some provinces and they are considerably different in level, he said such difference should be considered as a gap in the officials' ideological attitude toward the Party policy, not difference in the economic power of provinces.

The overall economy of the country can vigorously progress when North Hamgyong Province with great industrial potentials stands up, he said, expressing belief that the Provincial Party Committee would rectify its faults as soon as possible and wage a dynamic struggle for implementing the Party policies and thus build up the province into a reliable key industry zone of the country and bring about a radical turn in improving the people's living standard.

He was accompanied by Hwang Pyong So, Jo Yong Won, O Il Jong and Kim Yong Su, senior officials of the Central Committee of the Workers' Party of Korea.
